62. PROPERTY ANALYTICS FOR OWNER / AGENT	29
63. VIEW ANALYTICS PRIVACY	29
64. FEATURED PROPERTY FRONTEND	29

1. FRONTEND OBJECTIVE

IMMO BURUNDI will provide a modern, professional, multilingual real-estate marketplace where users can:

- Search properties
- View property details
- Contact agents
- Contact owners through approved channels
- Apply for rentals
- Request document verification
- Book property visits
- Save favorite properties
- Receive notifications
- Report listings
- View property verification status
- View promoted properties
- Create and manage their profiles

The frontend must connect to a secure backend API.

The frontend must never independently decide whether a user has permission to access sensitive information. All permissions must be verified by the backend.

2. PLATFORM STRUCTURE

The system has four main frontend environments:

A. Public Website

For visitors and clients.

B. Mobile Application

Android and iOS.

C. Agent Application

Field agents use the mobile application to collect property information, photos, GPS and documents.

D. Administration Dashboard

Secure web-based backend interface for authorized administrators, accountants, verification officers, managers and the Main Admin.

3. LANGUAGE SYSTEM

The application must support:

- French
- English
- Swahili

Language selector should be visible in:

- Header
- Mobile menu
- Login/register screen
- Settings

Example:

FR | EN | SW

The user's selected language should be saved to their account.

If the user is not logged in, save the language preference locally.

4. CURRENCY SYSTEM

Supported currencies:

- BIF — Burundi Franc
- USD — United States Dollar

The user should be able to choose their preferred display currency.

However, when a property is posted, the advertiser/admin selects the official listing currency:

Price: 350,000 BIF

or

Price: \$25,000 USD

The original listing currency must always remain visible.

Currency conversion should never replace the original price.

Example:

350,000 BIF

≈ \$125 USD

The converted value must be clearly identified as an estimate.

5. PUBLIC WEBSITE STRUCTURE

Main navigation:

- Home
- Buy
- Rent
- Land
- Commercial
- Featured
- Verified Properties
- Agents
- About Us
- Contact
- Login
- Register

Mobile navigation:

- Home
- Search
- Favorites
- Messages
- Profile

6. HOME PAGE

The homepage should contain:

Hero Section

Large search interface:

What are you looking for?

Tabs:

- Buy
- Rent
- Land
- Commercial

Search fields:

- Location
- Property type
- Minimum price
- Maximum price
- Bedrooms
- Property ID

Button:

Search Properties

7. HOMEPAGE SECTIONS

Featured Properties

Show promoted listings.

Each card should show:

- Main photo
- Property type
- Price
- Location
- Property ID
- Verified badge
- Featured badge
- Bedrooms if applicable
- Surface area

- View count
- Favorite button

Recently Added

Display newest approved properties.

Verified Properties

Display properties with verification status.

Popular Locations

Examples:

- Bujumbura
- Gitega
- Ngozi
- Muyinga
- Rumonge
- Bururi
- Kayanza

The administrator must be able to add/edit locations.

How IMMO BURUNDI Works

Three or four steps:

1. Search
2. Verify
3. Visit
4. Buy/Rent

8. PROPERTY SEARCH PAGE

Search results must support:

- Property ID
- Location
- Province
- Commune
- Zone
- Property type
- Buy/Rent
- Price range
- Surface area
- Bedrooms
- Verification status
- Featured status
- Agent
- Date listed

Sorting:

- Newest
- Lowest price
- Highest price
- Most viewed
- Featured

9. PROPERTY CARD

Every property card should display:

Photo

Large property image.

Badges

- Verified
- Fully Verified
- Featured
- New
- For Sale
- For Rent

Information

- Property title
- Property ID
- Location
- Price
- Currency
- Surface
- Bedrooms
- Bathrooms
- Property type

Actions

- View
- Favorite
- Share
- Contact
- WhatsApp

10. PROPERTY DETAIL PAGE

This is one of the most important pages.

The page must contain:

Gallery

- Multiple photos

- Full-screen photo viewer
- Zoom
- Swipe on mobile

Property information

- Property ID
- Title
- Description
- Price
- Currency
- Negotiable status
- Property type
- Listing type
- Surface
- Bedrooms
- Bathrooms
- Floors
- Parking
- Location
- GPS/map

11. PROPERTY VERIFICATION DISPLAY

Display a verification panel.

Example:

DOCUMENT VERIFICATION

- **Land Title — Verified**
- **Owner ID — Verified**
- **T.O.P — Partially Verified**
- **Sale Agreement — Not Verified**

If everything qualifies:

- **FULLY VERIFIED**

12. IMPORTANT VERIFICATION DISCLAIMER

The property page must display:

Verification Disclaimer

The verification status shown by IMMO BURUNDI is based on the documents and information presented to IMMO BURUNDI by the property owner, seller, representative, or agent at the time of verification.

A “Verified” or “Fully Verified” status does not constitute an absolute legal guarantee of ownership or guarantee that no future dispute, hidden claim, fraud, government registry error, or third-party right exists.

Users are encouraged to conduct independent legal due diligence and confirm ownership with the relevant authorities before completing a transaction.

There should be a “Learn more” button opening the full verification disclaimer.

13. PROPERTY OWNER / AGENT CONTACT

The public should not automatically see sensitive owner information.

Display:

Contact Agent

Buttons:

- Call
- WhatsApp
- Message
- Request Visit
- Apply to Rent

Owner private phone number should remain protected unless the business process specifically authorizes its disclosure.

14. WHATSAPP BUTTON

Every eligible listing can have:

Contact on WhatsApp

The backend should generate the appropriate WhatsApp link/message.

Example message:

Hello, I am interested in property BDI-BJM-KAM-2026-0001 listed on IMMO BURUNDI.

15. MAP

Property detail page should include a map.

Possible providers:

- Google Maps

- OpenStreetMap

The administrator should control whether the exact GPS location is public.

For security/privacy, the public map may show an approximate location rather than the exact property coordinates.

16. PROPERTY VIEWING / ANALYTICS SYSTEM

This must be built into the frontend.

Every property should display statistics to authorized users.

Example:

1,284 views

87 favorites

24 enquiries

8 visit bookings

17. WHO VIEWED THE PROPERTY?

The system should distinguish between:

Anonymous visitors

The system records:

- View
- Approximate location/country if legally permitted
- Device type
- Browser
- Date
- Time
- Referral source

But their identity is not displayed to the owner/agent.

Example:

1,284 total views
923 unique visitors

Logged-in users

The system may record:

- User ID
- Date/time
- Property viewed
- Device/session

However, the owner/agent should not automatically receive the person's name or phone number simply because they viewed a property.

This is important for privacy.

18. VIEWER PRIVACY RULE

Viewing a property is not the same as contacting the owner.

Therefore:

Property owner/agent sees:

- Total views
- Unique views
- Views by date
- General traffic statistics
- Favorites
- Enquiries
- Visit bookings

They do NOT automatically see:

- Name of every viewer
- Phone number of every viewer
- Email of every viewer
- Private account details

A user's identity becomes available through a legitimate interaction such as:

- Contact request
- Rental application
- Visit booking
- Explicit enquiry
- Other authorized action

19. PROPERTY ANALYTICS DASHBOARD

For authorized agents/admins:

Overview

- Total views
- Unique viewers
- Favorites
- Shares
- WhatsApp clicks
- Phone clicks
- Enquiries
- Visit bookings

Chart

Views:

- Today
- 7 days
- 30 days
- 90 days

Traffic sources

Example:

- IMMO BURUNDI Search
- Google
- Facebook
- WhatsApp
- Direct link

20. MAIN ADMIN ANALYTICS

Main Admin gets global analytics.

Platform statistics

- Total users
- Active users
- Total agents
- Active agents
- Properties
- Published properties
- Sold properties
- Rented properties
- Verification requests
- Promotions
- Total views

Financial statistics

- Verification revenue
- Promotion revenue
- Sale commissions
- Rental commissions
- Total revenue

21. FAVORITES

Users can save properties.

Property card:

♡ Add to Favorites

After saving:

♥ Saved

Favorites page:

- Property photo
- Property ID
- Price
- Location
- Status

- Last price change
- Availability

If property becomes:

- Sold
- Rented
- Archived

the user should receive a notification.

22. PROPERTY SHARING

Users can share listings through:

- WhatsApp
- Facebook
- Messenger
- Copy link
- Email
- Native mobile sharing

Each property must have a shareable URL.

Example:

"immoburundi.com/property/BDI-BJM-KAM-2026-0001"

23. PROPERTY REPORT BUTTON

Every public listing should have:**Report this property****Reasons:**

- Wrong information
- Fraud suspicion
- Incorrect price
- Duplicate listing
- Wrong location
- Inappropriate content
- Already sold/rented
- Other

Reports go to authorized administrators.

24. USER REGISTRATION

Users can register with:

Option 1

Phone number

Option 2

Email

Registration fields:

- Full name
- Phone
- Email optional
- Password
- Language
- Address optional

Verification:

- Phone OTP
- Email verification where applicable

25. LOGIN

Login with:

- Phone number
- Email

Password.

Optional future:

- OTP
- Google
- Apple

26. CLIENT DASHBOARD

After login:

Dashboard

- Saved properties
- Recent views
- Applications
- Visit bookings
- Messages
- Notifications

27. CLIENT PROFILE

Fields:

- Profile photo
- Full name
- Phone
- Email
- Address
- Language
- Preferred currency

Actions:

- Edit profile
- Change password
- Delete/deactivate account
- Notification settings

28. RENTAL APPLICATION FRONTEND

Button:

Apply to Rent

Form:

- Name
- Phone
- Address
- Occupants
- Children
- Occupation
- Advance available
- Desired move-in date

Before submission:

Display applicable rental rules.

Example:

Maximum occupants: 6
Minimum advance: 2 months

29. RENTAL APPLICATION STATUS

Client can see:

- Submitted
- Under Review
- Approved
- Rejected

- Cancelled

30. VISIT BOOKING FRONTEND

Property page:

Schedule a Visit

If visit booking is enabled, show available sessions.

Example:

Property Visit

Saturday, 26 September

10:00–11:00

7 / 10 places remaining

[Book Visit]

31. VISIT COUNTDOWN

When booking is still open:

Booking closes in:

02 Days

04 Hours

21 Minutes

Once closed:

Booking Closed

32. VISIT BOOKING RULES

User must be logged in.

The system should prevent:

- Duplicate booking
- Booking after capacity is reached
- Booking after closing time

33. USER VISIT BOOKINGS

Client dashboard:

My Visits

- Property
- Date
- Time
- Booking code
- Status

- Location
- Cancel booking

Statuses:

- Pending
- Confirmed
- Cancelled
- No-show

34. AGENT FRONTEND

Agents need a dedicated interface.

Agent dashboard:**Overview**

- My properties
- Drafts
- Submitted
- Under review
- Published
- Sold
- Rented
- Views
- Enquiries
- Visit bookings
- Performance

35. AGENT PROPERTY CREATION

Agent clicks:**Add Property****Steps:****Step 1 — Basic Information**

- Property type
- Sale/Rent
- Title
- Description

Step 2 — Location

- Province
- Commune
- Zone
- GPS
- Address

Step 3 — Property Details

- Surface
- Rooms
- Bedrooms
- Bathrooms
- Floors
- Parking

Step 4 — Price

- Amount
- BIF/USD
- Negotiable

Step 5 — Owner Information

Private backend information.

Step 6 — Photos

Camera/gallery upload.

Step 7 — Documents

Upload:

- Land Title
- T.O.P
- Owner ID
- Sale Agreement

Step 8 — Review

Agent reviews everything.

Step 9

Submit for Review

36. AGENT CANNOT PUBLISH

After submission:

Status: Under Review

The agent must not have a Publish button.

Only authorized admins can approve and publish.

37. SMART PRICE ESTIMATOR

During property creation:

Display:

Suggested Market Range

Estimated: 120,000,000 – 145,000,000 BIF

Based on:

- Location
- Property type
- Surface
- Previous market data
- Comparable properties

Display:

This estimate is an automated market indication and is not a guaranteed selling price.

38. OFFLINE AGENT MODE

The mobile app should allow agents to create property records without internet.

Offline:

- Save property
- Save photos
- Save GPS
- Save documents
- Continue editing

When internet returns:

Synchronizing...

Then:

Successfully synchronized

If conflict:

Action required

39. AGENT PERFORMANCE

Agent dashboard:

- Properties submitted
- Properties approved
- Properties rejected
- Properties sold
- Properties rented
- Total views
- Total enquiries
- Visit bookings
- Rating
- Number of deals
- Commission earned where authorized

40. AGENT PROFILE PUBLIC PAGE

Public agent profile may show:

- Agent name
- Profile photo
- Agent ID
- Region
- Rating
- Number of published properties
- Number of completed deals
- Active listings

Do NOT expose private personal information.

41. TOP AGENT BADGE

Authorized admin can designate:

Top Agent

Badge:

★ **Top Agent**

The system must not automatically give financial or sensitive information publicly.

42. ADMIN DASHBOARD

Admin dashboard should be modular.

Menu:

- Dashboard
- Properties
- Agents
- Clients
- Verification
- Promotions
- Rental Applications
- Visit Bookings
- Accounting
- Reports
- Notifications
- Staff
- Permissions
- Audit Logs
- Settings

The menu must change according to permissions.

43. PROPERTY ADMIN SCREEN

Admin can:

- Search properties
- Filter
- Open listing
- Review documents
- Review owner information if authorized
- Review agent
- Approve
- Reject
- Request correction
- Publish
- Archive
- Mark sold
- Mark rented

44. PROPERTY REVIEW SCREEN

Show:

Public information

and separately:

Sensitive information

Sensitive information must display only if the administrator has permission.

45. DOCUMENT REVIEW SCREEN

Each document:

Land Title

Status:

- **Verified**
- **Partial**
- **Not Verified**

Admin actions:

- Verify
- Mark partial
- Reject
- Request replacement
- Add internal note

46. VERIFICATION REQUEST DASHBOARD

Filters:

- Pending
- Payment pending
- Payment confirmed
- Under review
- Completed
- Rejected

Search:

- Verification code
- Property ID
- Client
- Phone

47. ACCOUNTING FRONTEND

Accounting dashboard must be separated into categories.

Verification

- Requests
- Payments
- Revenue

Promotion

- Orders
- Payments
- Revenue

Sales Commission

- Deals
- Commission
- Payments

Rental Commission

- Deals
- Commission
- Payments

48. MAIN ADMIN FINANCIAL DASHBOARD

Only Main Admin should see the complete platform-wide financial dashboard by default.

Display:**Today****Revenue:**

BIF XXXXX

USD XXXXX

This Week**Revenue:**

BIF XXXXX

USD XXXXX

This Month**Revenue:**

BIF XXXXX

USD XXXXX

Categories**Verification****Promotion****Sales commission****Rental commission**

49. PAYMENT VERIFICATION

Accountant can see:

- Transaction code
- Payment type
- Amount
- Currency
- Payer
- Payment method
- Payment proof
- Status

Buttons:**Confirm Payment****Reject Payment**

The Main Admin can see all accounting information.

50. UNIQUE PAYMENT PURPOSE CODE

Whenever a payment is required, the system generates a unique reference.

Example:**VER-BDI-2026-000001**

The customer uses this code as the payment purpose/reference.

For promotion:**PRO-BDI-2026-000001**

The frontend must display the code prominently.

51. REPORTS FRONTEND

Reports menu:

- Daily
- Weekly
- Monthly
- Annual
- Regional
- Agent
- Verification
- Promotion
- Commission

Main Admin can export:

- PDF
- Excel

52. STAFF MANAGEMENT

Authorized administrators can see:

- Staff list
- Departments
- Roles
- Status
- Staff ID

Sensitive information appears only when authorized.

Main Admin can access:

- Full name
- Photo
- Phone
- Address
- Documents
- Employment information
- Other sensitive fields

53. PERMISSION MANAGEMENT UI

Main Admin:

Users → Permissions

Can:

- Assign role
- Grant permission
- Remove permission
- Give temporary permission
- Define regional scope
- Define departmental scope

Example:

Accountant A
Can view verification payments
Cannot view staff personal information
Cannot view global financial reports

54. NOTIFICATION SYSTEM

Notifications for:

Clients

- New message
- Visit confirmation
- Visit cancellation
- Rental application update
- Property status change
- Favorite property sold/rented

Agents

- Listing submitted
- Listing approved
- Listing rejected
- Correction required
- New enquiry
- Visit booking
- Property sold/rented

Admins

- New verification request
- Payment submitted
- New property submission
- Report generated
- Suspicious activity

55. MESSAGING

Optional first version:

- Client → Agent
- Client → IMMO BURUNDI
- Admin → Agent
- Admin → Client

Messages must be associated with a property when appropriate.

Example:

Property BDI-BJM-KAM-2026-0001

56. ADMIN SEARCH

Global search should allow authorized administrators to search:

- Property ID
- Agent ID
- User
- Phone
- Verification code
- Promotion code
- Transaction code
- Commission code

Search results must respect permissions.

57. ADMIN AUDIT SCREEN

Main Admin sees:

- User
- Action
- Date/time
- IP
- Module
- Record
- Before
- After

Example:

Accountant A confirmed transaction VER-BDI-2026-000021
20 September 2026 — 14:42

58. MOBILE APP HOME

Mobile home should prioritize:

- Search

- Featured properties
- Nearby properties
- Verified properties
- Recent properties
- Favorites

Bottom navigation:

Home | Search | Favorites | Messages | Profile

59. NEARBY PROPERTIES

With user permission, the app can use location.

Display:

Properties near you

Sort by:

- Distance
- Price
- Newest

Location permission must be optional.

60. MAP SEARCH

Users can browse properties on a map.

Map markers should show:

- Property type
- Price
- Property ID

Click marker → property card.

61. PROPERTY VIEW COUNTER

Frontend should show public view count if enabled.

Example:

1,284 views

However, the number must be generated by backend analytics.

The frontend must not artificially increase views.

Repeated refreshes from the same session should not create unlimited fake views.

62. PROPERTY ANALYTICS FOR OWNER / AGENT

Authorized listing owner/agent sees:

Property performance

Views: 1,284

Unique visitors: 923

Favorites: 87

WhatsApp clicks: 42

Phone clicks: 18

Visit requests: 12

Rental applications: 5

63. VIEW ANALYTICS PRIVACY

The analytics page must NOT expose individual visitor identity by default.

Instead show aggregated information.

Example:

Views by country

Burundi — 82%

Rwanda — 6%

DRC — 5%

Tanzania — 4%

Other — 3%

Only collect/display location information where legally permitted and appropriately anonymized.

64. FEATURED PROPERTY FRONTEND

Featured properties should have:
